Product Description

Versatile Spiral Pointed Tap For Mold Steel And Aluminum Alloy Production

Product Description

Function Features

Taps are usually single or grouped. Small and medium-sized through-hole threads can be tapped at one time with a single tap.

When processing blind holes or large-size screw holes, group taps are often used, that is, more than 2 taps are used to complete the processing of a screw hole in sequence. Group taps are available in equal and unequal diameter designs.

For taps with equal diameters, each tap has a different cutting cone length; for taps with unequal diameters, each thread size is different, and only

the last one has a complete tooth profile.

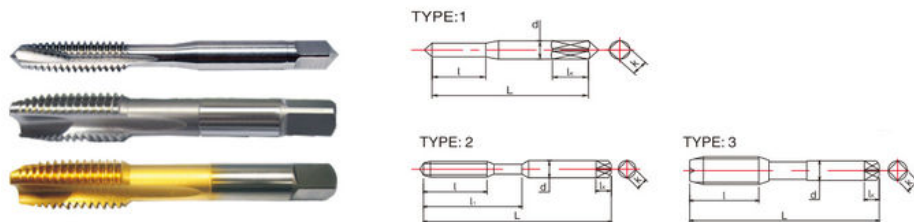

Scope of application:

used for processing copper and aluminum, iron materials, mold steel, aluminum alloy, etc.
